

Technology Risk Intelligence -- Weekly Exception Summary

Run date: 2026-09-18 17:56 | Status: DRAFT -- for analyst/manager review prior to governance submission

Summary Narrative (auto-drafted -- review before submission)

This week's technology risk intelligence cycle reviewed 10 in-scope systems across vulnerability management, patch compliance, and access recertification data sources. 28 exceptions were identified against defined SLA thresholds, comprising 12 vulnerability SLA breaches, 7 patch compliance breaches, and 9 overdue access recertifications. Of note, 1 open critical-severity vulnerability finding(s) remain unremediated and are flagged for priority follow-up with control owners. 1 record(s) could not be reconciled to the master system list during data quality checks and have been excluded from this analysis pending source-system clarification; see the unreconciled records log. All 6 data quality checks were completed prior to distribution, of which 2 raised findings requiring follow-up (detailed below).

Key Metrics

Systems Reviewed	Total Exceptions	Vuln SLA Breaches	Patch SLA Breaches	Access Overdue
10	28	12	7	9

Data Quality Attestation

6 quality checks executed prior to distribution (4 passed, 2 raised findings).

Check	Finding
duplicate row check (access_review)	1 duplicate access_id row(s) found and removed
orphan system_id check (access_review vs master list)	1 row(s) reference a system_id not in the master system list: ['LEGACY-FTP-01']

Top Exceptions (traceable to source evidence)

System	Exception Type	Detail	Evidence Ref
API-GATEWAY	Access Recertification Overdue	Admin access not recertified for 182 days	ACC-0036
API-GATEWAY	Vulnerability SLA Breach	Open Medium finding overdue by 15 days	VULN-1023
API-GATEWAY	Vulnerability SLA Breach	Open Medium finding overdue by 51 days	VULN-1024
AUTH-SVC	Access Recertification Overdue	Read-Only access not recertified for 195 days	ACC-0032
AUTH-SVC	Access Recertification Overdue	Standard User access not recertified for 181 days	ACC-0031
AUTH-SVC	Vulnerability SLA Breach	Open Medium finding overdue by 53 days	VULN-1018
AUTH-SVC	Vulnerability SLA Breach	Open Medium finding overdue by 22 days	VULN-1019
AUTH-SVC	Vulnerability SLA Breach	Open High finding overdue by 78 days	VULN-1020
CORE-BANK-01	Patch SLA Breach	Not patched for 60 days (SLA: 45 days)	PATCH-CORE-BANK-01
CORE-BANK-02	Vulnerability SLA Breach	Open High finding overdue by 69 days	VULN-1002

Full exception register (28 rows) and QA log available in accompanying CSV files for evidence traceability. Generated automatically by the exception tracking pipeline; narrative and prioritisation to be reviewed and finalised by analyst prior to distribution.
